

1. Bigneat Chemcap Ductless Fume Cupboard

Bigneat's EDU Chemcap fume cabinet (ductless, recirculatory filtration) is ideal for use in education, providing staff and students with a flexible system that allows excellent all round vision and ensures safety is maintained.

The use of Chemcap™ carbon filtration (type MP) makes it ideal for a school laboratory or prep-room as it removes a very wide variety of fumes and vapours. Cabinets have trapezium shaped front access and double hinged front doors which open fully to allow access to the cabinet interior for loading, setting up an experiment and for cleaning. The base tray is black which is excellent for highlighting spillages. Two service ports with covers are provided in the rear panel.

The cabinet can be placed onto an existing work surface or supplied with its own mobile bench (order separately). The mobile bench enables the cabinet to be fully mobile, large castors (lockable) facilitate easy movement of the cabinet from room to room over rough floors and door sills.

The Chemcap™ fume cupboard meets British Standard BS 7989:2001 (for filter efficiency and retention capacity).

Optional extras include:

Secure Docking Hub

Security and protection for your students and staff – enables your cabinet to be moved around safely.

- Wall-mounted secure utility connections
- Lockable, accessed by authorised users only
- Customisable access plate in base
- Connections secure at all times, in use or not
