1. Rheostats

A range of high quality rheostats offering excellent value for money. Wound with heavily oxidised resistance wire on a vitreous enamel steel tube, which is supported on robust diecast end stands. The heavy duty sliding contact is of multi-leaf phosphor bronze, nickel plated for corrosion resistance. 4mm terminal posts are fitted, facilitating external connection with a conventional 4mm plug.

4. Lascells Bridge Rectifier System

A must for the effective demonstration of this important circuit. This unit contains a bridge rectifier circuit with LEDs, showing which diodes are conducting during each half cycle of the A.C. supply. The clear front panel label shows the current path at each stage through the on-board load resistor. In addition, there is a smoothing capacitor which may be switched on as required. The unit may be powered from a 6V D.C. supply (mains or battery) with the connections reversed for each half cycle. A better approach is to use a slow signal generator (about 1Hz) or our special A.C. waveform generator, which allows the signal to be paused at any point in the cycle.
