## 1. Thermodynamics Kit

The thermodynamics kit helps to teach the temperature related behaviour of mechanical systems. The kit includes experimental apparatus including metal blocks with heating elements, linear rods with heaters, Leslie cube and Joly's bulb. Also included are measuring instruments such as digital thermometers, energy meter and infrared thermometer. Supplied in Grattells trays for ease of movement and storage. Learning objectives/ experiments:

- Heat capacity of liquids
- Heat capacity of solids
- Linear expansion of heat
- Heat absorption
- Heat radiation
- Expansion of gases – Charles' law
- Boyle's law
