1. Human Heart Conditions Model

A detailed 3D rendering of the larger than life size human heart and arteries. With its vibrantly coloured anatomy, it is ideal for studying the structure, function, and various pathologies of the human heart. Key pathologies are coloured and numbered for comparison with the anatomy key that is included. The heart itself can be removed from the base and it can be separated into two pieces for further exploration. This model provides a visually and kinesthetically effective method for studying the structure, function, and various pathologies of the human heart and arteries (myocardial infarction, atherosclerosis, and cardiomyopathy). Identification key card included.

3. 3B Human Circulatory System

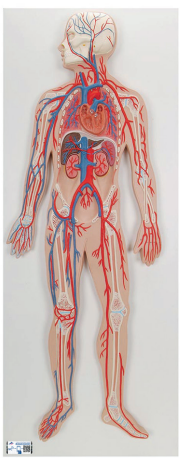

A colourful and anatomically accurate teaching aid of the human circulatory system. Circulatory system delivered on baseboard for easy display in a classroom. This half life size relief model of the human circulatory system details the following anatomical structures:

- The arterial/venous system
- Heart
- Lung
- Liver
- Spleen
- Kidneys
- Partial skeleton

4. Artery, Vein and Capillary Model

Three-dimensional model set includes enlarged artery, vein and capillary models showing cross-sections and interior structures. Artery structures highlighted include tunica, tunica media, internal elastic lamina and tunica intima. Vein structures highlighted include tunica, tunica media, internal elastic lamina, tunica intima and valve. Capillary structures highlighted include endothelium, single cell and cell nucleus. Anatomy is numbered for easy reference. Includes detailed keycard for easy identification.

Made of polyvinyl chloride (PVC) plastic for durability. Hand-painted using vibrant eco-friendly paint.
