1. Cholesterol Model

Cholesterol is a waxy substance that comes from two sources: your body and food. Your body, and especially your liver, makes all the cholesterol you need and circulates it through the blood. But cholesterol is also found in foods from animal sources, such as meat, poultry and full-fat dairy products. Your liver produces more cholesterol when you eat a diet high in saturated and trans fats. Excess cholesterol can form plaque between layers of artery walls, making it harder for your heart to circulate blood. Plaque can break open and cause blood clots. If a clot blocks an artery that feeds the brain, it causes a stroke. If it blocks an artery that feeds the heart, it causes a heart attack. Size 26 x 18 x 20cm approx. Weight 289g approx.

Code	Pack	Price
BIO1134	Each	£58.41

2. HIV Retrovirus Model

This model enlarged millions of times, shows the structure of the HIV retrovirus, including the outer lipid membrane with protein structures, and the internal nucleus containing the viral genome. Mounted on a base. Supplied with English key card. Size 13 x 13 x 18cm approx. Weight 320g approx.

Code	Pack	Price
