

## 1. Visking Dialysis Tubing

Visking tubing is a selectively permeable membrane tube made from reformed cellulose. It can be used to demonstrate/model osmosis, diffusion, dialysis and digestion in the small intestine. The tubing retains the larger molecules (12-14 daltons) such as starch but releases the smaller glucose molecules.

Code	Ø, mm	Wall Thickness, mm	Pack	Price
★ TUB2002	14.3	0.03	30m	£65.65
