pGLO Bacterial Transformation Kit

BIO-RAD

Use Bio-Rad's exclusive pGLO plasmid to transform bacteria to express the green fluorescent protein (GFP) gene from the bioluminescent jellyfish *Aequorea victoria*, which causes the bacteria to glow green under UV light. The same procedure is used to create "designer proteins". Use this kit to illustrate the concept of DNA > RNA > Protein > Trait and the roles that external and internal factors play in gene regulation - all within the exciting context of genetic engineering.

- Hands-on genetic engineering - transform bacteria with a jellyfish gene
- Visible, dramatic phenotype - transformants glow green under UV light
- Teaches gene regulation - GFP expression is under the control of an arabinose-inducible promoter
- Reinforces maths skills - students calculate transformation efficiency

ELISA Immuno Explorer Kit

BIO-RAD

Bio-Rad's ELISA immuno explorer kit provides a hands-on way to learn about antibodies - how they are produced by the immune system and how their unique properties have revolutionised medicine, epidemiology, and life science research. Teachers have the flexibility to select one of three different ELISA-based protocols that use real antibodies to demonstrate how antigen or antibody detection can be used in biodefense, immunology, and health science applications.

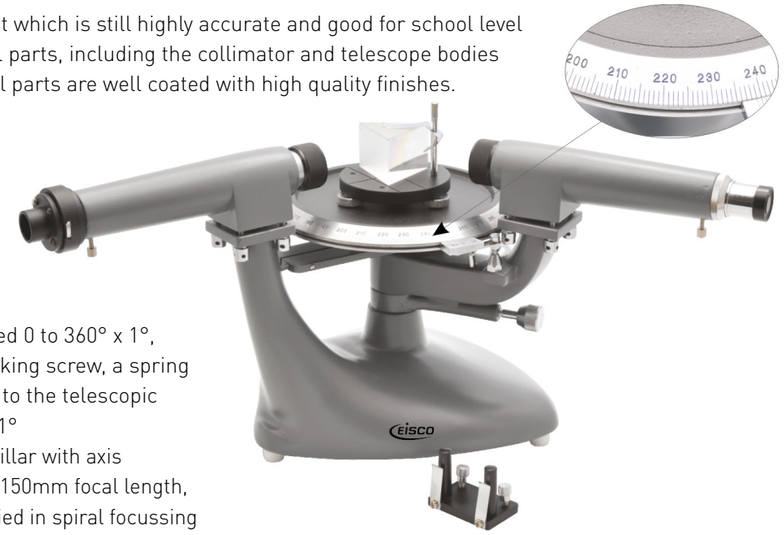

- Flexible curriculum - with options for three different lab activities, you can choose the type of test most relevant to your course: ELISA for tracking disease outbreaks (such as a zombie apocalypse), ELISA for antigen detection (for example, pregnancy, drug, environmental or disease detection), or ELISA for antibody detection (past exposure to disease)
- Uses real antibodies - no simulated, coloured solutions
- Activities include three investigation lab options and a post-lab assessment
- Lab activity can be completed in a single, 45-minute classroom period

Spectrometer

An competitively priced instrument which is still highly accurate and good for school level spectrometry. The main structural parts, including the collimator and telescope bodies are high quality castings. All metal parts are well coated with high quality finishes.

- Scale: 170mm diameter, divided 0 to 360° x 1°, independently rotates with locking screw, a spring loaded Vernier scale attached to the telescopic mount provides readings to 0.1°
- Collimator: mounted on fixed pillar with axis adjustment, objective lens has 150mm focal length, aperture of 212mm and is carried in spiral focussing system, unilaterally adjustable slit 6mm long
- Telescope: mounted on movable pillar with adjustment by a locking screw and axis adjustment, objective lens has 170mm focal length, 21mm aperture and is carried in a spiral focussing system, ramsden eyepiece with cross wires and locking ring focus adjustment
- Prism table: table is provided with three levelling screws and has lines marked to assist placement of prism
- Includes 1 prism clamp for prisms up to 40mm high, 1 diffraction grating holder, aperture 25 x 25mm, 1 small screwdriver, 1 tommy bar for axis adjustment, and full instructions

NEW 5% OFF

The thermodynamics kit helps to teach the temperature related behaviour of mechanical systems. The kit includes experimental apparatus including metal blocks with heating elements, linear rods with heaters, Leslie cube and Joly's bulb. Also included are measuring instruments such digital thermometers, energy meter and infrared thermometer. Supplied in Gratnells trays for ease of movement and storage. Learning objectives/experiments:

- Heat capacity of liquids
- Heat capacity of solids
- Linear expansion of heat
- Heat absorption
- Heat radiation
- Expansion of gases – Charles' law
- Boyle's law

UV Germicidal Eyewear Cabinet - Goggles Sanitiser

NEW

5% OFF

Up to 36 pairs of goggles or glasses can be placed into this UV sanitising cabinet. Once the eyewear is in, the door is then closed and locked and a 15 minute timer begins. The UV lamp will not operate unless the doors are closed and latched eliminating the possibility for any UV exposure. The UV light kills any germs on the eyewear. There is an indicator light which informs the user that sterilisation is in process.

- Uses UV germicidal irradiation (UVGI) with a high efficacy in the UVC range
- Will not be effective for products that are porous or have parts that are not exposed to the light
- Can rest on a desk, lab bench, or be hung on a wall (mounting hardware included)
- Unit measures 26" x 10" x 29", and is approximately 54lbs
- Inside grid measures 3.5" x 3.5" x 8" deep

Benchmark™ UV Clave™ UltraViolet Chamber

2 YEARS NEW

Benchmark Scientific

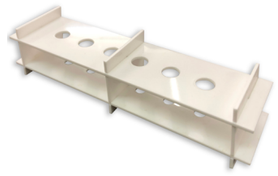

NEW

Short-wave UV light is an effective method for the disinfection of surface DNA, RNA and microorganisms. With the UV Clave™ chamber, highly focused UV irradiation is used to disinfect tools, vessels and other research items, eliminating up to 99% of surface contamination. The UV Clave™ includes powerful UV-C bulbs on both the top and bottom of the chamber, combined with the proprietary shelf that allows for >90% of UV-C light transmission and highly reflective chamber walls, giving true 360° exposure with no blind spots.

- Inactivates DNA, RNA, viruses and bacteria
- Adjustable cycle time
- Optional heating cycle can be added to assist in drying items that may have been washed or chemically disinfected prior to insertion
- Integrated auto shut-off prevents illumination when the door is open
- Chamber comes with 2 wire and 1 transparent shelf

Inspire PowerPro™ Prime Power Supply

The PowerPro™ Prime is ideal for general laboratory use where a smoothed or regulated output is not required.

- Output voltage: 2-14V AC/DC in 2V steps
- Current output: 6A maximum (combined AC/DC)
- Robust ProLock™ voltage limiter allows the setting of the upper voltage ceiling
- Full wave rectified DC output (unsmoothed and unregulated)
- Resettable short circuit protection
- Stackable with integrated handles and a detachable IEC mains cable
- Dimensions: 25 x 26 x 13cm, 5.5kg
