

What plastics can you RECYCLE?

There are 7 different types of plastic which are all very different.

For RecycleLab to produce high-quality recycled material, we need to be very selective about the types of plastic we accept.

We only accept 4 different types of plastic:

1. HDPE
2. PET
3. PP
4. PS

By only collecting these plastics, we are able to sort them into the different types at our warehouse.

The pure streams of each plastic are then recycled into high quality material which can be used to make new products.

By being highly selective, we can aim to recycle 100% of the waste we collect, allowing us to offer you a guaranteed recycling service.
