Attention, se reporter aux instructions.
Precaución, consultar las instrucciones.

Installation and Fasteners

Provision is made in rear of cabinet with four holes 6mm diameter to provide fixing point to a secure wall. Recommend Shield Anchor Stud Type 8 x 85mm Drill Size 14.

These fixings are inaccessible when cupboard door is locked.

Surface Finish

All painted surfaces inside and out applied with a powder paint finish, a high performance coating for use where good chemical resistance is required.

The 3 adjustable height shelves are produced from stainless steel, which is particularly durable in use and they can be easily removed, cleaned and autoclaved where necessary.

Locks and Doors

The lock is designed such that the key cannot be removed unless the mechanism is in the locked position.

If unlocked the door naturally hangs slightly ajar and the key will be in the lock.

The lock complies with BS 3621: 1980.

The unit is supplied with 2 keys one for use the other a secure backup.

We record the key number in our product Serial number database.

Where keys are lost or locks become damaged or suspect-tampering replacements can be purchased – enquire for details quoting serial number.

The door is recessed in anti-jemmy flanges making it difficult to force entry.

Marking

The cupboard is marked with following information on a secure label on side:

- Manufacturer: Nickel-Electro Ltd, Oldmixon Crescent, Weston-super-Mare, BS24 9BL

The instruction book contains following information:

- Manufactured to BS 2881:1989
- Security Level 1.
- Wall mount

Guidance on use and siting

The contents of the Store will vary depending on needs of the customer and no guidance given on this subject. There should be a formalized procedure on governance of the keys and receipt and issue of contents of the Store.

The Store should be sited:

- In a room without access through door or window to exterior of the building.
- Away from prying eyes.
- In a room which can be secured when unattended.
- Away from sources of heat and humidity e.g. radiators, pipes, sunlight, sink.
- In good illumination.
- Preferably adjacent to other storage units.
- Where continuous manning in vicinity and or a room with medical purpose.
